***Ex Parte Letter***

The Honorable Julius Genachowski  
The Honorable Robert McDowell  
The Honorable Mignon Clyburn  
The Honorable Jessica Rosenworcel  
The Honorable Ajit Pai  
Federal Communications Commission  
445 12<sup>th</sup> Street, S.W.  
Washington, DC 20554

***Connect America Fund, WC Docket No. 10-90; A National Broadband Plan for Our Future, GN Docket No. 09-51; Establishing Just and Reasonable Rates for Local Exchange Carriers, WC Docket No. 07-135; High-Cost Universal Service Support, WC Docket No. 05-337; Developing a Unified Intercarrier Compensation Regime, CC Docket No. 01-92; Federal-State Joint Board on Universal Service, CC Docket No. 96-45; Lifeline and Link-Up, WC Docket No. 03-109; Universal Service Reform – Mobility Fund, WT Docket No. 10-208***

Dear Chairman Genachowski and Commissioners McDowell, Clyburn, Rosenworcel and Pai:

This letter is sent by over 650 telecommunications and advanced service providers identified below to ensure that the Federal Communications Commission (FCC) and our elected representatives in Congress have clear and unambiguous notice of our collective concerns with the “regression analysis”-based caps on Universal Service Fund (USF) support that were adopted in the FCC’s November 2011 “Transformation” Order and finalized in an order the Wireline Competition Bureau released in April 2012. We have heard from some corners that there must not be significant concerns with these caps due to the limited waivers filed to date. While we have many concerns beyond these caps with respect to the Order’s effect on rural consumers, we wish in this specific letter to dispel immediately and comprehensively any notion that rural, rate-of-return regulated incumbent local exchange carriers (RLECs), such as the hundreds of companies noted below, agree that these new caps comply with law, are workable for providers making long-term investment decisions in hard-to-serve areas, or will serve the interests of rural consumers.

By way of background, RLECs are committed carriers of last resort in their communities. Most of us are small businesses headquartered in the locations we serve. We are drivers of our local economies, significant employers in our small communities, and suppliers of the vital connections between rural areas and the wider world. Nearly all of us operate not only within the relatively populated boundaries of rural towns, but also across the sparsely populated surrounding regions. Those areas include national parks and forests, sites that supply critical energy resources, and the many ranches, farms, and other agribusiness operations that feed the United States and fulfill our nation’s role as the “breadbasket of the world.” We are companies and cooperatives formed to “fill the gaps” in areas left behind since the infancy of the Bell system, and we serve the vast expanses in our country where the business case for investing in networks and providing telecommunications services is limited, at best.

Congress has historically been well aware of the challenges associated with serving such areas, and therefore deemed it essential to include within the Telecommunications Act of 1996 a requirement that universal service support be predictable and sufficient. Unfortunately, the FCC's most recent "transformation" of the USF and related intercarrier compensation (ICC) mechanisms failed to determine what might constitute "sufficient" funding to achieve for universal service. Instead, the FCC concluded that current levels of USF funding—even with reductions in ICC revenues squeezed within them—should be adopted as a "budget" for USF going forward.

Although the insufficiency of support levels is of course a significant concern, this letter focuses more specifically on the unpredictability caused by the USF changes and the corresponding effect on current and future rural broadband deployment. In particular, the regression analysis framework provides no means for companies such as ours to determine how caps may change from year-to-year. This lack of predictability undermines our efforts to engage in responsible network planning. Many of us have retained paid experts (i.e., consultants who have worked for years, if not decades, on cost studies and cost models) who report that predicting the effects of the regression analysis on an individual company beyond one year or so is all but impossible. This impossibility arises because the regression analysis caps are not only based upon the acts or omissions of *every other* RLEC (or an unidentifiable subset of RLECs), but because the limits will be recalculated each year based upon acts and omissions of RLECs *two years prior to the recalculation*. This frustrates any opportunity for company managers to engage in the kind of long-term planning and investment decisions required in a capital-intensive business such as rural telecommunications. Moreover, this unpredictability, together with a concern that the "rules of the game" can change so easily midstream, also will hinder our ability to access capital on reasonable terms.

In short, the new rules compel companies to form capital budgets each year based upon what *other companies* did two years ago without knowing *how* the actions of others will affect recovery limits until it is too late to react or adjust given the long-term nature of the investments at issue and the fixed costs involved. Indeed, it is quite possible that one of us could do "next to nothing" in terms of network investments and *still* be caught by the caps two years later because everyone else did even less. Small businesses cannot run efficiently in the face of such uncertainty, and this uncertainty flies in the face of the statutory mandate of predictability.

We are a diverse group of companies serving diverse areas. Some of us are affected severely by the regression analysis caps today. Some of us are affected only slightly by the caps. Some of us are entirely unaffected by the caps as they stand currently. We may have different views on whether some capping mechanism is required and how it should be applied, if at all. However, we are united in our collective concern about the lack of transparency and pervasive unpredictability of these regression analysis caps. Those of us who are affected by the caps are still struggling to determine precisely why and how to avoid them going forward. Those of us who are unaffected by the caps are struggling to determine if they can be avoided going forward, and whether any investment or increased operations (such as additional maintenance efforts) will result in becoming "the next one to go."

Finally, the availability of waivers is of little, if any, comfort in this process. We have heard the FCC repeatedly cite the availability of waivers as a solution to seemingly every concern raised regarding USF reforms. However, after-the-fact waivers—which are determined at the discretion of FCC staff and can be obtained only after spending tens or hundreds of thousands of dollars to prepare applications and months of waiting for an answer—cannot substitute for a predictable and clearly defined USF mechanism that is established by appointed commissioners. Moreover, the FCC already warned in its transformation order that waivers will not be granted on a regular basis.

We recognize that the FCC must balance many interests and concerns in undertaking reform, and we do not minimize the challenges the FCC faced in doing so. But the FCC missed the mark in allowing staff to implement these regression analysis caps. Reform should achieve greater predictability rather than introducing new unpredictability. Reform should promote responsible rural broadband investment by giving clear rules of the road, rather than generating confusion that will only bring rural broadband investment and lending to a halt.

We have heard that the FCC's doors are always open for discussion regarding USF and ICC reform concerns. Please accept this letter from the hundreds of companies listed below, and please take prompt action to address the significant concerns raised by the regression analysis caps. We need clear rules that allow us to plan for and carry out rural broadband investment in lieu of a framework that keeps us guessing about whether to invest or not. Without such clear rules of the road, consumers in RLEC areas are at significant risk of being “frozen in time” as to the broadband they receive today—most of which is below the FCC's targeted 4/1 speed—and some consumers stand at risk of seeing broadband deteriorate or disappear altogether.

In closing, we hope again that you will not take our focus on the regression analysis caps in this letter as an indication that this is our only concern with respect to the order just adopted and further reforms still under consideration. We simply have focused on these caps to express a common set of concerns with respect to these caps across the industry.

Thank you for your attention to this correspondence on behalf of our companies. We look forward to a favorable response on behalf of the many rural residents and businesses we serve.

Sincerely,
